DAVID

HKN-93CS Simple Operating Instructions

1. Introduction of Controller Interface

1.Status Bar

Alarm information display, Power failure alarm battery indication, RTC real time

2.Temperature control area

Skin temperature 1, Skin temperature 2, Current equipment operating mode, Heater heating power ratio

3.Menu Bar

Menu Bar, Curve function, oximetry function, Weighing function

4.Function key

Home key, Unlock/Lock key, Silence key

5.Module function

Timing function, Phototherapy function, oximetry function

2.Temperature control area

Click the red frame selection area to enter the temperature setting interface, select the operating mode of the device, and set the temperature control state.

|			
	Baby mode		Manual mode
	Pre-warm mode		Increase key
	Decrease key		> 37℃ setting key
	OK key		

b

3.Module function

Click the red frame selection area to turn on or off the current timing mode, click temperature control area enter the timing setting interface, select the timing mode of the device.
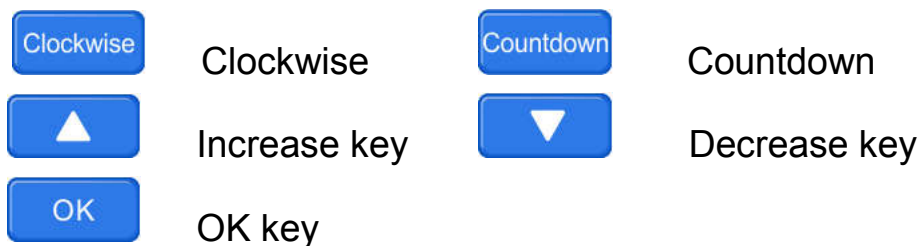

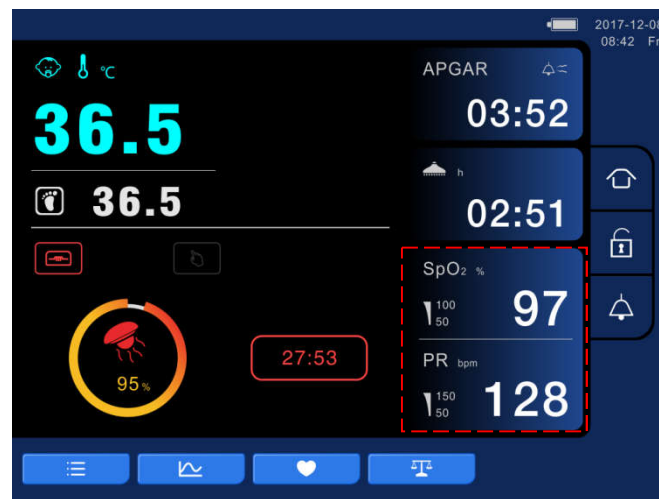

APGAR   APGAR timing   CPR   CPR timing

Click the red frame selection area to turn on or off the phototherap light, click temperature control area enter the phototherapy function setting interface, select the control method of the phototherapy function.

Clockwise   Clockwise   Countdown   Countdown

▲   Increase key   ▼   Decrease key

OK   OK key

d

Click the red frame selection area to enter the SpO$_2$ setting interface, which can control the on/off of pulse oximeter monitoring module, and set the high/low alarm limit of oximetry function.

ON	ON	OFF	OFF
T↑	High alarm limit key	⫫	Low alarm limit key
▲	Increase key	▼	Decrease key
OK	OK key		

4.Menu Bar

Click the curve key to view the data tendency chart of device, including temperature data, heater heating ratio data, SpO$_2$ data, and pulse rate data. Click the increase/decrease key to set the data cycle of tendency chart.

°C	Temperature	(icon)	Radiation head heating power
SpO$_2$	Oxygen saturation	PR	Pulse rate
▲	Increase key	▼	Decrease key
(icon)	Skin temperature 1	(icon)	Skin temperature 2
(icon)	Tendency chart	(icon)	Tendency table

f
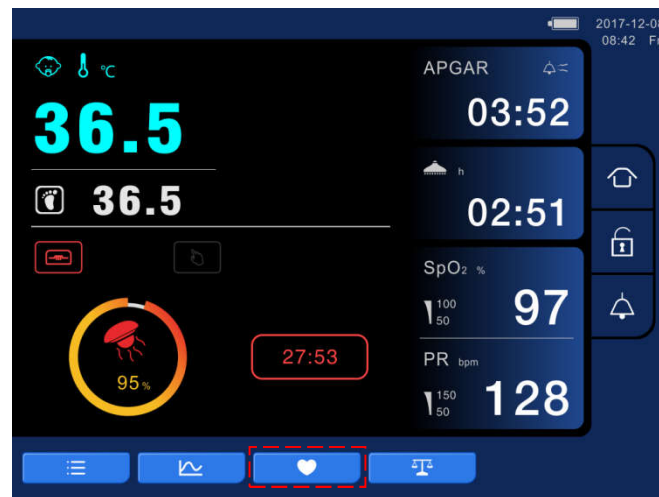

Click the oximetry key to enter the oximetry setting interface. Drag the navigation bar to set sensitivity, average time, and FastSAT .

SENS	SENS setting	Normal	Normal mode
APOD	APOD mode	Max	Max mode
AVG Time	AVG Time setting	FastSAT	FastSAT setting
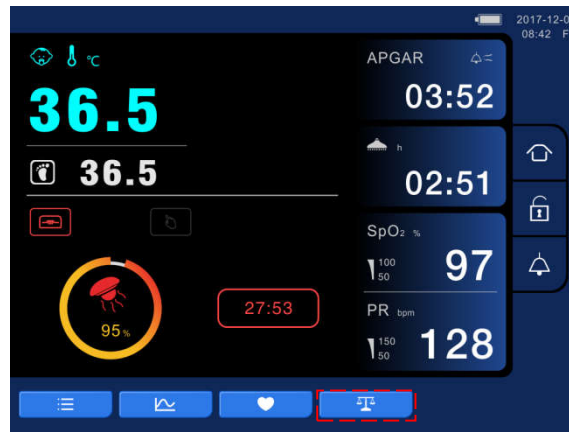

Click the baby scale key to enter the weighing interface, and drag the upper navigation bar to switch between the tendency chart and tendency table of the weight data. Click the weigh key, the baby scale function performs zero calibration, the system prompts the operator to pick up the baby 10S, then put the baby down after 10S, the weight area shows the current weight of the baby, the operator can click the record key to save the current data. If you have any doubt about the current weight, you can click the reweigh key to recalculate

the current weight; click the last weigh key to view the previous weight data, which is convenient for the operator to compare the differences between the two groups of data.

| Weigh | Weigh | Reweigh | Reweigh |

| Last weighing | Last weighing | Record | Record |

| Tendency chart | Tendency chart | Tendency table | Tendency table |

SPECIAL STATEMENT: All of the content in the manual is checked carefully, if there is any error or content of printing misunderstanding, our company retains finally explanation of this card-usage.

NOTE: The product's appearances maybe differ from the one in this manual, but it dose not affect the capability of product. Please understand if it brings you troubles.
